

last week, this was just a tiny vibration.

ITT ProSmart™ can monitor any piece of rotating equipment for **less than \$2,500 per machine, including remote commissioning and start-up**. That's state-of-the-art, predictive condition monitoring that checks and analyzes up to 22 critical conditions every five seconds. When you consider how much it can lower maintenance costs, extend equipment life—and avoid catastrophic failures—you'll agree ProSmart is the best upgrade you can make to your plant profitability program. Find out more.
